DA with Tableau Report Template

FINAL PROJECT REPORT TEMPLATE

Project Title: Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report

Course: Data Analysis with Tableau

1. Introduction

1.1 Project Overview

This project analyzes the adoption of Artificial Intelligence (AI) in education across countries and regions. Tableau is used to explore the dataset, compare locations and time periods, identify patterns, and communicate findings through visualizations, dashboards and a story.

1.2 Objectives

- Analyze global and regional AI adoption patterns in education.
- Compare countries and regions using relevant AI and education indicators.
- Identify trends and changes over time.
- Create meaningful Tableau visualizations and interactive dashboards.
- Present important observations through a Tableau story.

2. Project Initialization and Planning Phase

2.1 Define Problem Statement

Education decision-makers and analysts need a clear way to understand how AI adoption in education varies across countries, regions and time. Multiple indicators and inconsistent data formats can make comparison difficult. This project addresses the problem by preparing the data and developing an interactive Tableau-based intelligence report.

2.2 Project Proposal (Proposed Solution)

The proposed solution is a Tableau analytical report combining cleaned data with interactive charts, filters, KPIs, dashboards and story points. It enables users to compare locations, examine trends and explore relationships among relevant indicators.

2.3 Initial Project Planning

Task	Planned Output	Status
Problem definition	Problem statement	_____
Data collection	Raw dataset + sources	_____
Data cleaning	Processed dataset	_____
Visualization	Tableau worksheets	_____
Dashboard	Interactive dashboard	_____
Story	Story points	_____
Testing	Testing details	_____

3. Data Collection and Preprocessing Phase

3.1 Data Collection Plan and Raw Data Sources Identified

Dataset Name: _____

Source / Website: _____

File Format: _____ Rows: _____ Columns: _____

3.2 Data Quality Report

Data Quality Check	Observation / Action Taken
--------------------	----------------------------

Missing values	_____
Duplicate records	_____
Country/region naming	_____
Data type consistency	_____
Outliers / unusual values	_____

3.3 Data Exploration and Preprocessing

Document the steps used to inspect, clean, transform and prepare the dataset for Tableau.

- Checked dataset structure and field names.
- Handled missing or invalid values where required.
- Reviewed duplicate records.
- Standardized country/region names and categories.
- Converted fields to appropriate data types.
- Created required calculated or derived fields.
- Saved the final processed dataset for Tableau.

4. Data Visualization

4.1 Framing Business Questions

No.	Business Question	Suggested View
1	How does AI adoption vary across countries/regions?	Map / Bar
2	Which countries or regions have highest/lowest values?	Sorted Bar
3	How has AI adoption changed over time?	Line Chart
4	How do education indicators compare across adoption levels?	Scatter Plot
5	What is the regional distribution of AI adoption?	Bar / Heatmap
6	Which indicators show the largest changes?	Diverging Bar
7	Are AI adoption and education indicators related?	Scatter / Trend
8	How can users compare selected countries?	Dashboard + Filters

4.2 Developing Visualizations

Insert Tableau worksheet screenshots and record the fields, filters and key observation for each visualization.

Screenshot Placeholder: _____

Key Observation: _____

5. Dashboard

5.1 Dashboard Design File

Dashboard Title: Global AI Adoption in Education

Component	Planned Content
KPI Cards	Key totals / averages / selected indicators

Global Map	Country-level comparison
Trend View	Change over time
Regional Comparison	Region-wise comparison
Country Comparison	Interactive country selection
Relationship View	AI adoption vs education indicators
Filters	Year, Region, Country, indicators

Dashboard Screenshot Placeholder: _____

Tableau Public Link: _____

6. Report

6.1 Story Design File

Recommended story flow:

- Story Point 1 - Global AI Adoption Overview
- Story Point 2 - Regional Comparison
- Story Point 3 - Country-Level Comparison
- Story Point 4 - Adoption Trend Over Time
- Story Point 5 - Education Indicator Relationship
- Story Point 6 - Interactive Final Summary

Story Screenshot Placeholder: _____

Tableau Public Story Link: _____

7. Performance Testing

7.1 Utilization of Data Filters

Filters used: _____

7.2 No of Calculation Field

Number of calculated fields: _____

Calculated field names / purpose: _____

7.3 No of Visualization

Number of visualizations / worksheets: _____

Visualization list: _____

8. Conclusion / Observation

Write the major findings supported by the actual Tableau analysis. Avoid entering assumptions or unsupported numerical claims.

1. _____
2. _____
3. _____
4. _____

9. Future Scope

- Add newer data and extend the time period.
- Include additional AI and education indicators.
- Add forecasting or predictive analysis where suitable.
- Improve dashboard drill-down and interactivity.
- Connect the dashboard to regularly updated data sources.

10. Appendix

10.1 Source Code (if any)

GitHub Repository: _____

Relevant files / code description: _____

10.2 GitHub & Project Demo Link

GitHub Link: _____

Tableau Public / Project Demo Link: _____

Final Submission Checklist

- Introduction completed
- Problem statement, proposal and planning completed
- Dataset source and preprocessing documented
- Tableau visualizations inserted
- Dashboard screenshot and link added
- Story screenshot and link added
- Performance testing details added
- Conclusion and future scope completed
- GitHub and project demo links added
