

Dashboard Design

Date	23 September 2026
Team ID	Individual / To be filled
Project Name	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	5 Marks

Activity 1: Interactive and Visually Appealing Dashboard

The dashboard is designed to present global AI adoption in education in a clear, interactive and decision-oriented format. It combines KPI cards, geographic comparison, trend analysis and country/region comparisons so users can explore the data through filters.

Dashboard Design Principles

Principle	Implementation in the project
Clear and intuitive layout	KPI cards at the top, followed by trend, regional and country-level views.
Appropriate visualizations	Maps, bar charts, line charts, heatmaps and comparison views are used according to the question.
Interactive filters	Year, Region and Country filters can be used where those fields are available.
Consistent design	Consistent titles, labels, number formats and spacing across dashboard views.
Drill-down capability	Users can move from global/region summaries to country-level details when supported by the dataset.
Responsive and readable	Charts are arranged to keep important KPIs and comparisons visible without excessive clutter.

Proposed Dashboard Layout

Dashboard Area	Content / Visualization	Purpose
Header	Project title + Year/Region/Country filters	Identify the report and control the analysis.
KPI Cards	Overall AI Adoption, Countries Covered, Average/Median Adoption, Selected Year	Give a quick global overview.
Global View	Filled map or symbol map by country/region	Show geographic differences in AI adoption.
Trend View	Line chart by year	Identify changes in AI adoption over time.
Regional Comparison	Sorted bar chart by region	Compare adoption across regions.
Country Comparison	Top/Bottom country bar chart	Identify differences among countries.
Relationship View	Scatter plot of AI adoption vs. selected education indicator	Explore relationships between adoption and education indicators.

Major Outcomes / Key Insights to Highlight

- Identify countries and regions with relatively higher or lower AI adoption using the selected dataset measure.
- Highlight the overall direction of AI adoption over the available years.
- Show regional variation and differences between countries.
- Use filters to identify how the selected year or region changes the dashboard results.
- Use the relationship view to observe whether AI adoption moves together with the selected education indicator; avoid treating correlation as causation.

Activity 2: Publish Dashboard on Tableau Public
